

Control Statements:

Java **Control Statements** are used to **Control the Order of Execution Flow in a Java Program**, based on **Data Values** and **Conditional Logic**.

There are three main categories of Control Flow Statements;

Selection statements: if, if-else and switch.

Iteration statements: while, do-while and for.

Transfer statements: break, continue, return, try-catch-finally and assert.

We use **Control Statements** when we want to change the **Default Sequential** order of execution.
